Branch Offices: Wilmington, North Carolina, and Augusta, Georgia

Introductory

THE Linville Nurseries, at Linville, N. C. (on the Black Bear Trail from Canada to Florida, U. S. Route 221), were established in 1929, and are ideally located on the slope of Grandfather Mountain at an elevation of 4,000 feet above sea-level; and upon the 16,000-acre tract owned by the Linville Improvement Company.

We specialize in **native plants** as are described in this folder. The location from which these plants will be collected and grown, being amid the peaks of the Blue Ridge, one of the oldest mountain ranges of the world, gives us the opportunity to offer plants of unusual vigor and hardiness.

TERMS AND CONDITIONS

SHIPPING SEASON: Usually from March 1, to the last of May, and September 1, until the ground freezes.

TERMS: Sixty days net from date of invoice. Less 2% discount for cash in ten days. If purchaser's credit is unknown to us, cash or satisfactory reference is required.

QUOTATIONS: 5 plants of the same variety and size will be charged at the 10 rate; 30, at the 100 rate; 300, at the 1000 rate.

PACKING: No packing charge on orders of \$10.00 or more.

SHIPPING INSTRUCTIONS: Give these in all cases.

LIABILITY AND CLAIMS: All shipments travel at purchaser's risk. We do not guarantee safe delivery.

No liability to attach to us where frost, drought, fire, or other casualties beyond our control prevent delivery of stock that may be contracted for.

SHIPPING FACILITIES: Carload lots from Spruce Pine, North Carolina. Express shipments from Linville and Spruce Pine. Can also make delivery by truck.

OUR GUARANTEE: We guarantee all plants to be true to name, first class in every respect, and just as represented.

Orders are accepted according to terms and conditions as above.

Address all communications to:

L. A. and P. J. A. BERCKMANS,
Associates, Augusta, Georgia

NOTE: Neither L. A. Berckmans nor P. J. A. Berckmans is connected with any other nursery.

Abies fraseri—Nursery Grown.

ABIES fraseri. Fir. Balsam Fir. Superior to American Silver Fir. Rare. (Nursery Grown)

	Per 10	Per 100
18 to 24 inches, stocky, well-branched	\$ 5.00	\$ 45.00
2 to 3 feet, stocky well-branched	9.00	85.00
3 to 4 feet, heavy, well-branched	13.75	100.00

Azalea vaseyi—Nursery Grown.

We make combination carload shipments. Send list for quotations. Place order now and have plants reserved.

KALMIA latifolia, Calico Bush. Mountain Laurel. Gives a fine effect when interplanted with Rhododendrons. Habitat from Nova Scotia to Florida. Very adaptable as to location. Will grow on edge of swamps almost as well as in dry soil. Will succeed in sun or shade, but gives best results in partial shade. They are not happy in clay or alkaline soil. (Same soil as recommended for Rhododendrons.)

(Nursery Grown), Transplanted Clumps.

Tsuga caroliniana—Nursery Grown.

Tsuga canadensis—Nursery Grown.

PLANTING AND CARE OF AZALEAS, KALMIAS AND RHODODENDRONS

(Please read these instructions carefully.)

Soil Composition: To get the best results, the soil must be acid and well drained.
(testing pH 5-6) An excellent mixture is:

2 parts of sandy loam.

1 part of leaf mold, preferably from hardwood growth,
(avoiding use of leaf mold from maple trees.)

1 part Florida Humus.

1 part old dairy manure, at least one year old.

Planting: This is best done in the fall as soon as the wood is matured and can be continued until a month before the ground freezes. The spring planting can start as soon as the frost is out of the ground, and continue until growth starts. Dig holes of ample size and fill in around the plant with the soil mixture as above recommended. Set plant in hole to the same depth that it stood in its original position. Firm soil slightly so that there will be no air pockets. **Water thoroughly**, add more soil after water settles. Level the ground. **Mulch** to a depth of 2 to 4 inches with old hardwood sawdust, rotted leaves, or leaf mold. Replenish mulching from time to time as needed. As these plants have only surface roots, they should not be cultivated with a hoe. Pull out the grass and weeds. Never allow the plants to suffer for water.

To insure yearly bloom, break off the seed pods as they form immediately after blooming.

Fertilization: An annual application, just before growth starts, of well-rotted old dairy manure or cotton seed meal is advisable. This should be scratched in lightly, so as not to destroy the surface roots. Water thoroughly after applying the fertilizer, and replace mulch.

Insects: The lace-bug and red spider can be eradicated by spraying with Sunoco oil, 1 gallon to 50 gallons of water, and add $\frac{1}{2}$ pint of Black Leaf 40. Another good spray is Nursey Volck and Black Leaf 40, (See directions on container); or 6 pounds of Octagon soap flakes, $\frac{1}{2}$ pint Black Leaf, 40 to 50 gallons of water. As soon as the insects hatch, usually in April or May, spray and repeat at intervals, should there be another infestation.

Fungus: Leaf blister or other fungi can be eradicated by spraying with Bordeaux Mixture (4-5-50), or with Sulfocide, 1 to 200. Always apply spray to all parts of stem and foilage and with plenty of force in the form of a fine mist.

Spraying: This should never be done when the mercury is below 40°, neither should it be applied during the heat of the day—late afternoon is the proper time.

Note: You cannot expect satisfactory results unless plants are properly planted and subsequently cared for.
